## **DETAILED ACTION**

This is a first office action on the merits of patent application S. N. 10/614,729.

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 112***

Claims 1-11 rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation “and/or” in line 5. The scope of the phrase is unascertainable.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another

who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-6 and 8, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Quigley ('279).

Quigley discloses a no-back device (Fig. 1) comprising a plurality of ratchet members (22) connectable to a rotating member, pawls (25), interlocking means (40), projections and indentations (Fig. 3, 40, 41). Regarding the limitation that the "ratchets/pawls members are formed from respective materials having different chemical and/or physical properties", the prior art discloses discrete members that would inherently exhibit distinct properties (point, linear, planar, and three-dimensional defects; in addition to those unique qualities caused by processing – e.g., voids, etc.) that yielding different physical traits. Concerning claim 1, since no frame of reference has been given for the angular offset of the ratchet member (e.g., teeth), any two arbitrary points would satisfy the claimed limitation.

***Allowable Subject Matter***

Claim 7 and 9-11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Field et al. ('112), Eyraud et al. ('848), Kremer ('881), and Todd et al. ('975) disclose other no-back devices comprising multiple ratchet members.
